

**MASSACHUSETTS
NRG Business Solutions – Disclosure Label**

Electric power suppliers are required by the Department of Public Utilities (DPU) to provide customers with a disclosure label. The label enables consumers to look at the energy sources, air emissions and information about the supplier’s company in order to make a more informed choice of a power supplier. Consumers can compare energy labels to make the best choice based on their energy needs.

Generation Price

All kWhs	The average price that was charged in the last month of the previous quarter was 0.08¢/kWh . Please refer to your most recent bill and your Terms of Service for actual prices. Your price does not vary by usage level.
Customer Service	1-877-297-3780 for business customers 1-877-297-3795 for residential customers

Power Source

<p>Generation by fuel type as a percentage of total generation is supplied by ISO – New England who operates the regional power market.</p> <p>NEPOOL System Mix – Q1 2016</p>	Power Source	Known Source	System Power	Total
	Biodiesel		0.00%	0.00%
	Biomass		1.88%	1.88%
	Coal		1.79%	1.79%
	Diesel		1.19%	1.19%
	Digester gas		0.07%	0.07%
	Efficient Resource (Maine)		0.21%	0.21%

Label Definitions

Generation Price

The Generation Price does not include charges for Distribution Service, other Department regulated services or other non-generation products of services. All customers are offered the same monthly variable rate (¢/kWh) or a fixed rate based on the Agreement Lock-In option if applicable (see the Agreement Terms of Service). The price does not change with usage level. See your most recent bill for your monthly use and actual prices. Contact NRG Business Solutions for more information.

Power Sources

NRG Business Solutions procures its electricity supply, on behalf of its customers, from system power contracts, not from specific generating units. The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England. System Power represents power purchased in the regional electricity market. The System Power distribution presented in the table is based on the most recently available information provided via the NEPOOL Generation Information System. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter.

Emissions

Emissions for each of the following pollutants are presented as a percent of the regional average emission rate. Arrows represent the emission rate from a hypothetical new generation facility.

Carbon Dioxide (CO₂) is released when fossil fuels (e.g., coal, oil, and natural gas) are burned. Carbon dioxide is a greenhouse gas and a major contributor to global warming.

Nitrogen Oxides (NO_x) forms when fossil fuels and biomass are burned at high temperatures. They contribute to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high level exposure. NO_x also contributes to oxygen deprivation of lakes and coastal waters which is destructive to fish and other animal life.

Sulfur Dioxide (SO₂) forms when fuels containing sulfur are burned, primarily coal and oil. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO₂ combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.

Labor Information

The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management, and protected by union contracts. The information on this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether or not a generator or supplier, during a strike by or lock-out of its employees, has replaced them with other workers.
