

NRG Energy Services

Keeping your business powered

 nrg
EnergyServices

If your plant's not available, you're not generating power or profits. NRG Energy Services reduces downtime and operational costs by ensuring that your units perform better and more reliably. We have decades of experience operating and maintaining plants, and we can do the same for your business.

Why NRG Energy Services

NRG Energy Services is the nation's most experienced third-party operations and maintenance (O&M) provider. With 9 gigawatts of third-party assets managed, we have the expertise to deliver customized O&M solutions that meet your business's unique operational needs.

Our national presence and market and regulatory know-how allow us to better serve you and your operations. Additionally, NRG's strategic relationships with suppliers and vendors allow us to provide more cost-effective solutions and an improved overall customer experience.

What we do

O&M services

NRG Energy Services has a nationwide reputation for increasing availability, reducing downtime and ensuring that units run smoother and more reliably. We offer O&M solutions for a wide range of power generation facilities:

- Coal
- Oil
- Natural gas
- Steam
- Simple cycle
- Combined cycle
- Combined heat and power
- Concentrated solar
- Biomass

Our highly trained specialists know how your equipment works and how to keep it working. With a proven track record in plant operations, total plant maintenance, and equipment repair, we ensure top system performance and reliability.

Maintenance services

Our maintenance services team can provide your business an unmatched level of care and expertise. With shops across the country, including an 80,000-sq.-ft. facility in Houston, Texas, we can service a range of plant equipment.

Our services include:

- Balance of plant maintenance
- Turbine and pump machine shop repair services
- Technical support
- Rotor life management program
- Technical oversight of inspection programs
 - Turbines
 - Generators
 - Boilers
 - High-energy piping
 - Major pumps
 - Generator inspections and testing
 - Transformers
 - Troubleshooting

From minor repairs to complete overhauls, our maintenance professionals help your business reduce costs, minimize downtime and keep your business energized.

Technical services

NRG Energy Services offers unsurpassed in-house technical expertise for every facet of plant operations and maintenance. Our staff includes more than 45 engineers who are among the most highly trained personnel in the industry. Their experience and deep knowledge of all plant and equipment types has enabled us to develop best practices that resolve any plant issue and drive efficient operation.

An unmatched commitment to safety

NRG Energy Services optimizes your plant's performance while maintaining the highest safety standards. Our Occupational Safety and Health Administration (OSHA) recordable incident rate is among the best in the nation and well below the industry standard. In fact, many of our sites have OSHA Voluntary Performance Programs status. This unmatched attention to safety helps us foster a culture of safety at your facility and ensure improved asset performance.
