PREPARED TESTIMONY OF HUGH DOUGLAS SANSOM

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Hugh Douglas Sansom; my business address is 4433 Genesee Street, Suite 401, Buffalo, New York 14225.

Q. BY WHOM AND IN WHAT CAPACITY ARE YOU EMPLOYED?

A. I am Managing Director, Distributed Energy Resource ("DER") Sales for NRG Energy, Inc. ("NRG").¹

10 Q. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND AND
11 BUSINESS EXPERIENCE.

12 A. I studied mathematics at United States Military Academy at West Point earning a
13 Bachelor Science. In addition, I earned my Master of Business Administration from The
14 Wharton School of the University of Pennsylvania. I earned my Professional Engineer
15 license from the Commonwealth of Virginia in 1984. My professional background
16 includes 30 years of experience in sales, operations, and project management. I have 20
17 years of experience in smart-grid and demand-response business development and project
18 development. I managed sales and field operations to deploy around 550,000 remote
19 control demand response devices with Pepco Holdings, Southern Maryland Electric Co-
20 op, and Central Hudson Gas & Electric. My *curriculum vitae* is attached as Appendix No.
21 HDS-1.

23 Q. FOR WHOM ARE YOU TESTIFYING IN THIS PROCEEDING?

¹ In this testimony, “NRG” refers to both NRG Energy, Inc. as well as its subsidiaries which provide services in California.

1 A. I am testifying on behalf of NRG Energy, Inc. In addition, I have reviewed the testimony
2 sponsored by the California Efficiency + Demand Council et al. (the “DR Coalition”),
3 and, on behalf of NRG Energy, Inc., we support the proposals made in that testimony.

4 Q. HAVE YOU TESTIFIED BEFORE REGULATORY BODIES AND, IF SO, IN
5 WHAT CAPACITY?

6 A. Yes, I have provided testimony before the Maryland Public Service Commission on a
7 major utility's residential demand-response program. This is the first time I have testified
8 before the California Public Utilities Commission ("the Commission").

9

10 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

11 A. The purpose of my testimony is to respond to the Commission’s *Order Instituting*
12 *Rulemaking to Establish Policies, Processes, and Rules to Ensure Reliable Electric*
13 *Service in California in the Event of an Extreme Weather Event in 2021* (“Order”),
14 Rulemaking 20-11-03. In doing so, I address only the Base Interruptible Program
15 (“BIP”), which is subsumed within Issue 2(d) of the Assigned Commissioner Scoping
16 Memo and Ruling (Dec. 21, 2020) (“Scoping Memo”). This is one of the issues that NRG
17 raised in opening comments on the scope that the Order proposed.² At that time, in the
18 interests of expediting this proceeding, NRG offered views both on the scope of the
19 proceeding and on the merits of certain issues. NRG continues to support these positions,
20 but here I offer my testimony to emphasize the importance of a successful program that
21 aligns customer interests with reliable outcomes, and which can easily be expanded
22 before summer 2021

23

² Opening Comments of NRG Energy, Inc. (Nov. 30, 2020), R.20-11-003.

1 **Q. WHAT CHANGES DO YOU PROPOSE TO THE BASE INTERRUPTIBLE
2 PROGRAM ("BIP") THAT THE COMMISSION CAN IMPLEMENT BY
3 SUMMER 2021, AND THEREBY INCREASE PARTICIPATION?**

4 A. I propose the following changes to BIP:

- 5 • Removal of the 2% cap on emergency Demand Response ("DR");
- 6 • Allow mid-year enrollment in BIP;
- 7 • Revision of Excess Energy Charges;
- 8 • Removal of the Load Impact Protocol; and
- 9 • Allow Third Party Demand Response Providers to Utilize Back-Up Generation (BUG).

10 I address each of these issues in turn.

11

12 **Q. WHY DO YOU PROPOSE REMOVING THE 2% CAP ASSOCIATED WITH
13 THE BIP PROGRAM?**

14 A. Issue 2(d)(ii) identified in the Scoping Memo inquires of parties to this proceeding
15 whether the 2% cap on BIP should be modified. The 2% cap on emergency DR capacity
16 that is not price-triggered and used for reliability purposes was established as part of a
17 settlement agreement reached in 2010 in D.10-06-034 (June 24, 2010).³ This Decision
18 stipulated that the cap start at 3% of the CAISO system peak, and decline to 2% for 2014
19 onwards, unless revised in a future proceeding, which has yet to take place. Based on
20 August and September 2020 activations, when analyzing NRG's customers' performance
21 for both BIP and the Capacity Bidding Program ("CBP"), BIP customers within NRG's
22 portfolio consistently performed higher under BIP than the CBP. During the August 14-
23 18, 2020 and September 5-6, 2020 BIP events, NRG's customers performed between 93%
24 and 100% during the emergency events.⁴ When reviewing NRG's CBP performance for
25 the summer 2020, for all Investor Owned Utilities ("IOU") CBP programs, NRG's CBP

³ https://docs.cpuc.ca.gov/word_pdf/FINAL_DECISION/119815.pdf

⁴ NRG customer performance is calculated as a daily average of all SubLAPs for each event day in the PG&E service territory.

1 portfolio of customers performed at 77%, 86%, and 92%. NRG’ customer performance
2 data clearly shows that BIP is a reliable source of emergency capacity. The Report on
3 System and Market Conditions, Issues and Performance: August and September 2020,
4 issued November 24, 2020 by the California Independent System Operator’s (“CAISO”)
5 Department of Market Monitoring⁵ indicates preliminary performance reporting for the
6 IOUs’ DR programs that reflects performance in the 57% to 65% range for August 14 and
7 15, 2020 events. However, based on NRG’s analysis of event data, for both the BIP and
8 CBP programs, NRG’s customers had significantly higher performance than what has
9 been indicated in this report. Therefore, maintaining the 2% cap on this readily available
10 capacity represented in the BIP program in light of potential reliability risks in 2021
11 artificially limits a program designed for emergencies when it is needed the most.

12

13 **Q. WHY DO YOU PROPOSE ALLOWING MID-YEAR ENROLLMENT IN THE**
14 **BIP PROGRAM?**

15 A. As the Order makes clear, California’s greatest reliability needs exist in relation to the
16 summer months. So long as DR resources perform in those months, prospective resources
17 should be allowed, at least for 2021 and 2022, to enroll on a mid-year basis in BIP and
18 other DR programs. Allowing third-party Demand Response Providers (“DRP”), or
19 resources, the ability to enroll mid-year, or even monthly, should be explored to increase
20 resource participation in BIP. It is important to note that there are several key data points
21 that go into evaluating whether a DR resource may be enrolled into DR programs (e.g.,
22 customer contact, interval data to look at load patterns, development of customer reduction
23 action plans). The evaluation and onboarding process between the customer and the DRP
24 can take several weeks or months to complete. Allowing monthly or mid-year enrollment
25 will allow the aggregator the needed time to collect the critical information needed to enroll
resources in the BIP program. Allowing monthly or mid-year enrollments fosters more

⁵ [Report on Market Conditions Issues and Performance August and September 2020-Nov 24 2020.pdf \(caiso.com\)](#), page 27.

1 participation for the BIP program by allowing third-party DRPs to continue marketing the
2 program, which allows additional resources to come online during critical peak periods.

3

4 **Q. YOU PROPOSE REVISIONS TO “EXCESS ENERGY CHARGES.” WHAT ARE**
5 **EXCESS ENERGY CHARGES?**

6 A. Excess Energy Charges are charges currently assessed on third-party DRPs for Excess
7 Energy⁶, which is any energy consumed during a curtailment event that is in excess of a
8 customer’s Firm Service Level.

9

10 **Q. WHY IS IT APPROPRIATE TO REVISE EXCESS ENERGY CHARGES AS**
11 **PART OF A BIP REFORM FOR SUMMER 2021 RELIABILITY?**

12 A. Excess Energy Charges are well in excess of the Locational Marginal Price (“LMP”) paid
13 by IOUs should they be short of energy, and they also do not correspond to prices for
14 resource adequacy. There is a need for an economic signal to ensure delivery of DR when
15 it is called upon, but such signal should be tied to the prices the market surfaces. The penalty
16 should also take account of the fact that DRPs are operating a portfolio of DR resources,
17 and an important part of the business model of those who aggregate typically quite small
18 contributions of individual customers is the offsetting risk profiles of each in providing an
19 aggregate amount of DR to the system.

https://library.sce.com/content/dam/sce-doclib/public/regulatory/tariff/electric/schedules/general-service-&-industrial-rates/ELECTRIC_SCHEDULES_TOU-BIP.pdf
http://regarchive.sdge.com/tm2/pdf/ELEC_SCHEDULES_BIP.pdf

1 **Q. WHAT REFORMS DO YOU PROPOSE WITH RESPECT TO EXCESS ENERGY**
2 **CHARGES?**

3 A. For the time being, NRG believes that the penalty price should be the system average LMP
4 when a BIP resource consumes “excess energy.” That is because for the coming summer
5 season, a paramount concern is system needs; the corresponding penalty for failing to
6 provide DR should be a system price measured at that time when BIP DR consumes excess
7 energy. For the same reason, DRPs should be permitted to aggregate their customers’
8 energy reductions at the portfolio level during BIP events. This allows the third-party DRP
9 to seek and obtain additional energy reductions from other customers within its portfolio,
10 thereby reducing or eliminating the penalty charge and still delivering the committed energy
11 needed when BIP is activated. This would assist in aligning incentives of DRPs and
12 customers within BIP to the overall goal of system reliability.

13

14 **Q. WHY DO YOU PROPOSE EXEMPTING SUMMER 2021 CAPACITY OFFERED**
15 **BY THIRD-PARTY DRPs FROM THE LOAD IMPACT PROTOCOL**
16 **REQUIREMENT?**

17 A. Currently, third-party DRPs seeking to qualify as Resource Adequacy ("RA") resources
18 must comply with the Commission's Load Impact Protocols ("LIPs"), which are an ex-ante
19 analysis of a DRP's projected curtailment capability. This requirement, established in
20 D.19-06-026 (June 27, 2019), terminated the exemption of third-party DR resources from
21 the requirement to use LIPs to calculate Qualifying Capacity ("QC"), an exemption which
22 was originally granted in 2016.⁷ As of the 2020 Compliance Year, third-party DRPs, like
23 the IOUs, must use LIPs to determine their QC, "unless or until a further exception is
24 established".

25 The current LIPs were implemented in 2008 in response to Decision D.05-11-009
26 (November 18, 2005) to develop measurement and evaluation protocols and cost-

⁷ See D.19-06-026 (June 27, 2019), mimeo, p. 41.

1 effectiveness tests for demand response offered by the investor-owned utilities. The LIPs
2 continue to serve that role adequately for the IOUs. However, the LIPs are inadequate for
3 determining QC for third-party DRPs for several reasons, including:

- 4 • LIPs were designed for the DR programs offered by the IOUs at the time. Their
5 reliability and validity for subsequent DR programs, especially for those offered by
6 third-party DRPs, has not been determined conclusively.
- 7 • LIPs require time series containing a sufficient number of participating and non-
8 participating California customers over a sufficient amount of time for their results to
9 be statistically reliable and valid. The ex-ante and ex-post analysis, which are integral
10 to the LIPs, include regression models that require this data at the finest granularity
11 levels possible (e.g., weather sensitivity, location). Third-party DRPs do not have such
12 data specifically for their customers, due to the customer acquisition and churn
13 characterizing competitive markets with customer choice. Ex-ante and ex-post analyses,
14 which are integral to the LIPs, include regression models that require such data ("panel
15 data") for valid, statistically significant results. Some third-party DRPs have attempted
16 to develop their own solutions to this problem, but apparently not to the Commission's
17 satisfaction.
- 18 • The LIPs are sufficiently complex that the IOUs engage external consulting firms to
19 perform the required calculations and produce the LIP reports. The associated costs are
20 eligible for rate recovery within Commission-approved budgets, an option not afforded
21 to competitive third-party DRPs.

22 Meanwhile, DRPs' efforts to comply, albeit imperfectly, with the LIP requirements, have
23 been largely or completely rejected by Energy Division staff after undergoing an arduous
24 review process that would not allow DRPs' resources to participate as Resource Adequacy
25 in time for Summer 2021. For these reasons, NRG requests that the Commission exempt
26 third-party DRPs from LIP requirements and enable these DRPs to focus on adding
27 capacity in a timely manner for emergencies during Summer 2021.

1 **Q. WHY SHOULD THE COMMISSION ALLOW FOR THIRD-PARTY DRPs TO**
2 **UTILIZE BACK-UP GENERATION?**

3 A. My experience implementing NRG’s DR programs is that customer interest in enrollment
4 dropped significantly when restrictions applied to Back-Up Generation units (“BUGs”)
5 associated with DR programs were implemented.⁸ NRG raised this issue in its opening
6 comments in this rulemaking, noting that customers are fatigued by unaccommodating and
7 ever-changing DR program designs.⁹ The Commission should seriously consider
8 prioritizing lifting the cap on a popular existing program, as described above, and also
9 facilitating customers’ participation in it by temporarily removing the restriction on BUGs
10 under the BIP program.

11 NRG acknowledges and understands why most fuel-powered BUGs have been
12 prohibited. However, given the current reliability situation in the state, authorizing BUGs
13 to rejoin the BIP program, a load reduction program utilized during statewide and local
14 emergency situations, and assist the State of California in decreasing demand during both
15 the peak demand and net demand peak hours, is warranted. As NRG outlined in its opening
16 comments, there are several sectors, including casinos, data centers, and other customers,
17 needing continuous, non-interruptible operations, that would have the ability to fully
18 participate in California’s DR Programs should the Commission lift the BUG ban.¹⁰ These
19 are customers that can easily and quickly be enrolled and are willing to participate, as they
20 had in the past. Excluding customers that operated BUGs resulted in a loss of consistent
21 and reliable load curtailment for the State of California, which could quickly be brought
22 back into the IOUs’ BIP programs for the summer 2021. Allowing BUGs to participate in
23 BIP will have a high likelihood of additional customer enrollments that would bring
24 additional supply during reliability events, such as reserve-shortage situations. With much

⁸ Decision [D.16-09-056](#). Original Order prohibiting most fossil fuel-powered Back-Up Generation (“BUG”) from being used to facilitate customers’ participation in several DR programs (BIP, CBP, and DRAM). *See also* [Resolution E-4906](#) and the IOU Advice Letters from [PG&E](#), [SCE](#) and [SDG&E](#), respectively.

⁹ NRG Opening Comments (Nov. 30, 2020), pp. 3-4, 9-10. R.20-11-003.

¹⁰ NRG Opening Comments (Nov. 30, 2020), pp. 10. R.20-11-003.

1 needed additional supply for 2021, and beyond, it is important to understand that these DR
2 customers have previously participated in California DR programs and are familiar with
3 the requirements of DR programs. Because this sector of customers had previously
4 participated in these programs, third-party DRP's would have the ability to quickly enroll
5 them into one of California's DR programs. Almost as important is this sector of customers
6 will need little sales effort as third-party DRP's have developed relationships with these
7 customers. This will allow for easy engagement and potential program enrollment.

8

9 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

10 A. It does, although I reserve the opportunity to testify on issues not covered in this
11 testimony on reply as needed.

Appendix HDS-1

HUGH DOUGLAS SANSOM

9 Harvester Court, Sewickley, PA 15143 +1 202-826-5155
Whody32@Yahoo.com

Professional Experience:

- NRG Energy, Inc., (February 2016-Present)
- Comverge (August 2011 – February 2016)-Director/General Manager
- Jarwood Biomass (2010-2011)-Co-Founder
- BPL Global (2007-2010)-Chief Operating Office
- NBC/Comcast (2002-2007)-Senior Vice President
- GTE Wireless (1995-1999)-Assistant Vice President
- Garden Way (1994-1995)-General Manager
- Procter & Gamble (1988-1994)-Brand Manager
- Officer, U. S. Army Corps of Engineers (1977-1986)

Significant Accomplishments and Experience:

Led a 40-person team to surpass sales, profitability, cash flow and business goals/objectives. Exceeded Comverge expectations by growing business \$122 million in less than 36 months. Expanded contracts by delivering exceptional customer service and operational excellence. Convinced an Investor Owned Utility to expand into 5 new markets without a competitive bid process. Convinced residents to join an energy saving program despite strong local opposition to the utility. As a result, deployed more than 540,000 Demand Response devices in 48 months, exceeding 50% penetration in Maryland, while exceeding budgeted revenue and profit goals every year. Earned recognition at the national utility industry conference as the best performing smart grid, Demand Response project by being awarded the 2014 POWERGRID International Project of the year.

Developed a Utility Scale Demand Response program. Developed a screening process to identify the best Utility prospects for Demand Response. Simultaneously developed an algorithm to assess if an offer would be acceptable to a prospective Utility and while acceptable to internal corporate financial hurdles. Successfully won 33 MW of Utility and Municipal contracts for NRG. Protocol required those contracts to be given to peers for execution so I could focus on new opportunities. Modified the approved asset-backed Demand Response model to function as an evaluation tool for In-Front-Of-The-Meter, Behind-The-Meter, and Turnkey offers.

Led an acquired business to new records. Selected for the Comcast acquisition team to buy AT&T. Post close, I persuaded the employees of an AT&T division to adopt a merit-based culture. Working collaboratively, we created efficiency programs, deployed operational improvements, and launched new solutions. We improved customer service metrics 20%, reduced overhead 15%, grew revenue 25% and boosted gross margins from 29.5% to 41.3%. Separately, the new merit-based culture led to the largest union decertification in cable industry history.

Built and maintained positive, productive relationships. Launched a monthly TV show to improve employee communication. At no cost, I used a handheld video camera and empty bandwidth on the Comcast cable network to launch a channel dedicated to my team. This ‘channel’ allowed me to communicate with 2,400 employees and their families across four states direct to their homes and their office. The new Employee Channel resulted in the highest employee satisfaction rating in the company. I also used the bandwidth to improve the company’s image among community stakeholders. This resulted in rapid approval of franchise agreements and strong relationships with elected officials.

Developed and implemented effective growth strategies. I improved profitability of BPL Global (a start-up) by focusing the business on a Software as a Service (‘SaaS’) based solution rather than hardware. Realigned core disciplines to support the new strategy. I led robust sales effort to educate clients. As a result, smart grid solutions grew from annual revenue of \$2.7 million to \$30 million, and margins grew from 10% to 40%.

Increased profitability by increasing customer satisfaction. After analyzing business practices, I linked sales and operations teams to improve delivery of promises and offers. This change reduced complaint escalations and improved customer satisfaction 22%. Customer service calls dropped from 270,000 to 140,000 per month, saving \$29 million per year in call center and field technical support costs. When I expanded the solution to a second market, customer satisfaction improved 25%. Customer service calls dropped from 360,000 to 240,000 per month, saving \$37 million per year in call center and technical support.

Developed and executed a new sales channel. I aligned the strategy of the new channel with cellular market conditions and customer expectations. Using a low-cost sales channel, I developed targeted advertising for specific prospect segments. In the first year, I added 108,000 new cellular customers and 451,000 customers in the second year. By the end of the first year, the new direct marketing channel was the most profitable division GTE Wireless with 30% less expense than retail. By the end of the second year, the new channel led GTE Wireless in both revenue and profit.

Led with confidence to deliver strong results. I persuaded Procter & Gamble Senior Management to support dual environmental and efficacy benefits for Dawn. I partnered with International Bird Research and Rescue Center to use Dawn to clean wildlife impacted by oil spills. Together we crafted an endorsement communicating environmental stewardship and exceptional cleaning. We also created a public relations program achieving \$10 million in unsolicited advertising in 30-days following the Exxon Valdez oil spill. Dawn dish soap grew behind heavy media delivery of this strategic 2-product benefit. Despite competition, volume

increased by 11%, share by 12% and profit by 18% in one year following the public relations program. The film I shot in Alaska and the marketing program is still used today.

Education:

Bachelor of Science Degree Mathematics, United States Military Academy

Master's Degree in Business Administration, Wharton School of the University of Pennsylvania

Professional Engineer License, state of Virginia
